Fighting Water Pollution

Environmental organizations have long worked for laws that prohibit or reduce water pollution. In 1972 the U.S. government passed the Clean Water Act. This and related laws regulate pollutants discharged into waterways. They also pay for wastewater treatment plants. Thanks to such laws many U.S. waterways are far cleaner than they were 50 years ago. Today, the fight against water pollution is a global one. The members of the United Nations are working together to safeguard the world's water for future generations.
